the aim of this work is threefold first it should be a monographical work on natural bundles  
and natural operators in differential geometry this is a field which every differential  
geometer has met several times but which is not treated in detail in one place let us explain  
a little what we mean by naturality exterior derivative commutes with the pullback of  
differential forms in the background of this statement are the following general concepts  
the vector bundle  $\pi: E \rightarrow M$  is in fact the value of a functor which associates a bundle over  $M$   
to each manifold  $M$  and a vector bundle homomorphism over  $f$  to each local diffeomorphism  
 $f$  between manifolds of the same dimension this is a simple example of the concept of a

natural bundle the fact that exterior derivative  $d$  transforms sections of a  $k^1 T^*M$  into sections of a  $k^0 T^*M$  for every manifold  $M$  can be expressed by saying that  $d$  is an operator from a  $k^1 T^*M$  into a  $k^0 T^*M$
